FEATURES

Bandwidth: 3.5 GHz Input noise current density: 8 pA/ \sqrt{Hz} Optical sensitivity -22.0 dBm¹ -20.4 dBm² Differential transimpedance: 3700 V/A Power dissipation: 80 mW Differential output swing: 260 mV p-p Input overload current: 5.6 mA p-p On-chip RSSI function Low frequency cutoff: 12 kHz On-chip PD filter: R_F = 200 Ω , C_F = 20 pF Die size: 0.7 mm × 1.2 mm

APPLICATIONS

4.25 Gbps optical receivers GbE/FC optical receivers SFF-8472-compliant receivers PIN/APD-TIA receiver optical subassemblies

4.25 Gbps, 3.3 V Low Noise, Transimpedance Amplifier

ADN2882

GENERAL DESCRIPTION

The ADN2882 is a 3.3 V high gain SiGe transimpedance amplifier (TIA) which converts the small signal current of a photo detector to a large differential voltage output. The ADN2882 features a typical 475 nA input-referred noise, enabling an optical sensitivity of -22 dBm (0.85 A/W PIN). With a bandwidth of 3.5 GHz, the ADN2882 allows a data rate operation up to 4.25 Gbps. Typical power dissipation is 80 mW.

To facilitate the assembly in small form factor packages, such as TO-46 headers, the ADN2882 provides an on-chip RC filter (200 Ω , 20 pF) and features a 12 kHz low frequency cutoff without using an external capacitor. An on-chip RSSI circuit, which generates a voltage proportional to the average photo-diode current, is available for power monitoring and assembly alignment.

The ADN2882 is available in die form. With a chip area of 1.2 mm \times 0.7 mm, the TIA layout is optimized for TO-Canbased packages.

 1 Based on 1550 nm PIN, C_D = 0.5 \pm 0.10 pF, responsivity = 0.85 A/W, ER = 9 dB, PRBS 2^{31} - 1 at 4.25 Gbps, BER < 10^{-12}. ^2 Calculated result based on an 850 nm PIN, C_D = 0.5 \pm 0.15 pF, responsivity = 0.48 A/W, ER = 9 dB, at 4.25 Gbps, BER < 10^{-12}.

 1 A signal current equivalent to $I_{INPP} = 10 \ \mu A$ is applied to the TIA input. No input capacitor is applied.

ABSOLUTE MAXIMUM RATINGS

Table 2.

Parameter	Rating
Supply Voltage (VCC to GND)	5 V
Maximum Voltage to All Input and Output Signal Pins	VCC + 0.4 V
Minimum Voltage to All Input and Output Signal Pins	GND – 0.4 V
Maximum Input Current	10 mA
Storage Temperature Range	–65°C to +125°C
Operating Ambient Temperature Range	-40°C to +95°C
Maximum Junction Temperature	125°C
Die Attach Temperature (<30 sec)	410°C

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Table 3. Pad Function Descriptions

Pad No.	Mnemonic	Pin Type ¹	Description
1	GND	Р	Ground. (Input return.)
2	IN	AI	Current Input. Bond directly to a photodiode (PD) anode.
3	TEST	AI	Test Probe Pad. Do not connect.
4	FILTER	AO	Filter Output. Pad 4 and Pad 5 are metal connected. Optional bond to a PD cathode.
5	FILTER	AO	Filter Output. Pad 4 and Pad 5 are metal connected. Optional bond to a PD cathode.
6	GND	Р	Ground.
7	RSSI	AO	Voltage Output. Provides average input current monitoring. Leave it open, if not used.
8	CAP	AI	Leave This Pin Open for Non-SONET Applications. For SONET applications, see Figure 10 and contact sales for assembly details.
9	GND	Р	Ground. (Output return.)
10	GND	Р	Ground. (Output return.)
11	OUTB	AO	Negative Output, CML, On-Chip 50 Ω Termination (AC or DC Termination).
12	OUT	AO	Positive Output, CML, On-Chip 50 Ω Termination (AC or DC Termination).
13	GND	Р	Ground. (Output return.)
14	GND	Р	Ground. (Output return.)
15	VCCFILTER	Р	On-Chip Filter Supply. Connect to VCC to Enable On-Chip RC Filter (200 Ω , 20 pF). Leave it open, if not used.
16	VCC	Ρ	3.3 V Power Supply. Place a 200 pF, RF decoupling capacitor close to the power pad to reduce the power noise.
17	VCC	Р	3.3 V Power Supply. Place a 200 pF, RF decoupling capacitor close to the power pad to reduce the power noise.

 1 P = power; AI = analog input; and AO = analog output.
