

Digitally Controlled Potentiometer (XDCP™)

The Intersil X9315 is a digitally controlled potentiometer (XDCP). The device consists of a resistor array, wiper switches, a control section, and nonvolatile memory. The wiper position is controlled by a 3-wire interface.

The potentiometer is implemented by a resistor array composed of 31 resistive elements and a wiper switching network. Between each element and at either end are tap points accessible to the wiper terminal. The position of the wiper element is controlled by the CS, U/D, and INC inputs. The position of the wiper can be stored in nonvolatile memory and then be recalled upon a subsequent power-up operation.

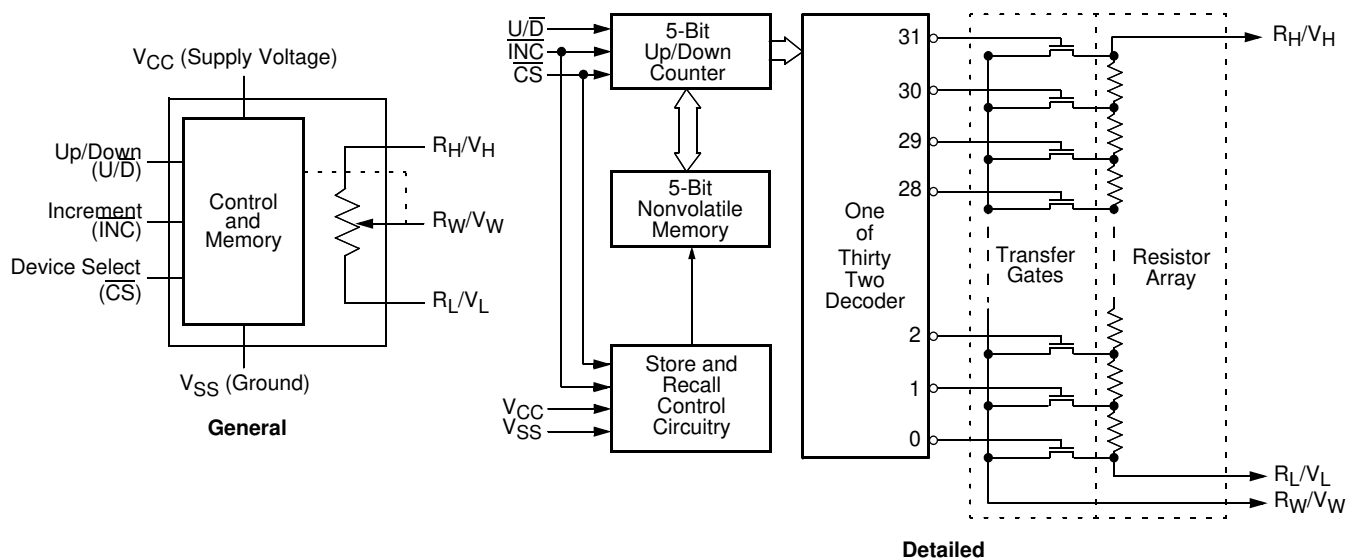

The device can be used as a three-terminal potentiometer or as a two-terminal variable resistor in a wide variety of applications including:

- Control
- Parameter Adjustments
- Signal Processing

Features

- Solid-state potentiometer
- 3-wire serial interface
- 32 wiper tap points
 - Wiper position stored in nonvolatile memory and recalled on power-up
- 31 resistive elements
 - Temperature compensated
 - End to end resistance range $\pm 20\%$
 - Terminal voltage, 0 to V_{CC}
- Low power CMOS
 - $V_{CC} = 2.7V$ or $5V$
 - Active current, $50/400\mu A$ max.
 - Standby current, $1\mu A$ max.
- High reliability
 - Endurance, 100,000 data changes per bit
 - Register data retention, 100 years
- R_{TOTAL} values = $10k\Omega$, $50k\Omega$, $100k\Omega$
- Packages
 - 8 Ld SOIC, MSOP and PDIP
- Pb-free plus anneal available (RoHS compliant)

NOTE: Intersil Pb-free plus anneal products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate termination finish, which are RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

*Add "T1" suffix for tape and reel.

Pin Descriptions

R_H/V_H and R_L/V_L

The high (R_H/V_H) and low (R_L/V_L) terminals of the X9315 are equivalent to the fixed terminals of a mechanical potentiometer. The minimum voltage is V_{SS} and the maximum is V_{CC} . The terminology of R_L/V_L and R_H/V_H references the relative position of the terminal in relation to wiper movement direction selected by the U/\bar{D} input, and not the voltage potential on the terminal.

R_W/V_W

R_W/V_W is the wiper terminal and is equivalent to the movable terminal of a mechanical potentiometer. The position of the wiper within the array is determined by the control inputs. The wiper terminal series resistance is typically 200Ω at $V_{CC} = 5V$.

Up/Down (U/\bar{D})

The U/\bar{D} input controls the direction of the wiper movement and whether the counter is incremented or decremented.

Increment (\bar{INC})

The \bar{INC} input is negative-edge triggered. Toggling \bar{INC} will move the wiper and either increment or decrement the counter in the direction indicated by the logic level on the U/\bar{D} input.

Chip Select (\bar{CS})

The device is selected when the \bar{CS} input is LOW. The current counter value is stored in nonvolatile memory when \bar{CS} is returned HIGH while the \bar{INC} input is also HIGH. After the store operation is complete the X9315 will be placed in the low power standby mode until the device is selected once again.

Pin Configuration

Pin Names

SYMBOL	DESCRIPTION
R_H/V_H	High terminal
R_W/V_W	Wiper terminal
R_L/V_L	Low terminal
V_{SS}	Ground
V_{CC}	Supply voltage
U/\bar{D}	Up/Down control input

Pin Names

SYMBOL	DESCRIPTION
INC	Increment control input
CS	Chip Select control input

Principles of Operation

There are three sections of the X9315: the input control, counter and decode section; the nonvolatile memory; and the resistor array. The input control section operates just like an up/down counter. The output of this counter is decoded to turn on a single electronic switch connecting a point on the resistor array to the wiper output. Under the proper conditions the contents of the counter can be stored in nonvolatile memory and retained for future use. The resistor array is comprised of 31 individual resistors connected in series. At either end of the array and between each resistor is an electronic switch that transfers the connection at that point to the wiper.

The wiper, when at either fixed terminal, acts like its mechanical equivalent and does not move beyond the last position. That is, the counter does not wrap around when clocked to either extreme.

The electronic switches on the device operate in a “make before break” mode when the wiper changes tap positions. If the wiper is moved several positions, multiple taps are connected to the wiper for t_{1W} (INC to V_W change). The R_{TOTAL} value for the device can temporarily be reduced by a significant amount if the wiper is moved several positions.

When the device is powered-down, the last wiper position stored will be maintained in the nonvolatile memory. When power is restored, the contents of the memory are recalled and the wiper is set to the value last stored.

Instructions and Programming

The \bar{INC} , U/\bar{D} and \bar{CS} inputs control the movement of the wiper along the resistor array. With \bar{CS} set LOW the device is selected and enabled to respond to the U/\bar{D} and \bar{INC} inputs. HIGH to LOW transitions on \bar{INC} will increment or decrement (depending on the state of the U/\bar{D} input) a five bit counter. The output of this counter is decoded to select one of thirty two wiper positions along the resistive array.

The value of the counter is stored in nonvolatile memory whenever \bar{CS} transitions HIGH while the \bar{INC} input is also HIGH.

The system may select the X9315, move the wiper and deselect the device without having to store the latest wiper position in nonvolatile memory. After the wiper movement is performed as described above and once the new position is reached, the system must keep \bar{INC} LOW while taking \bar{CS} HIGH. The new wiper position will be maintained until

changed by the system or until a power-up/down cycle recalled the previously stored data.

This procedure allows the system to always power-up to a preset value stored in nonvolatile memory; then during system operation minor adjustments could be made. The adjustments might be based on user preference, system parameter changes due to temperature drift, etc...

The state of U/\bar{D} may be changed while \bar{CS} remains LOW. This allows the host system to enable the device and then move the wiper up and down until the proper trim is attained.

Mode Selection

CS	INC	U/ \bar{D}	MODE
L		H	Wiper Up
L		L	Wiper Down
	H	X	Store Wiper Position
H	X	X	Standby Current
	L	X	No Store, Return to Standby

Symbol Table

WAVEFORM	INPUTS	OUTPUTS
	Must be steady	Will be steady
	May change from Low to High	Will change from Low to High
	May change from High to Low	Will change from High to Low
	Don't Care: Changes Allowed	Changing: State Not Known
	N/A	Center Line is High Impedance

Absolute Maximum Ratings

Temperature under bias -65°C to +135°C
 Storage temperature -65°C to +150°C
 Voltage on CS, INC, U/D, V_H, V_L and V_{CC} with respect to V_{SS} -1V to +7V
 $\Delta V = |V_H - V_L|$ 5V
 Lead temperature (soldering 10 seconds) 300°C
 I_W (10 seconds) ±7.5mA

Recommended Operating Conditions

Temperature (Commercial) 0°C to +70°C
 Temperature (Industrial) -40°C to +85°C
 Supply Voltage (V_{CC}) (Note 4) Limits
 X9315 5V ± 10%
 X9315-2.7 2.7V to 5.5V

CAUTION: Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only; the functional operation of the device (at these or any other conditions above those listed in the operational sections of this specification) is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Potentiometer Characteristics (Over recommended operating conditions unless otherwise stated.)

SYMBOL	PARAMETER	TEST CONDITIONS/NOTES	LIMITS			
			MIN	TYP	MAX.	UNIT
	End to end resistance tolerance				±20	%
V _{VH}	V _H terminal voltage		0		V _{CC}	V
V _{VL}	V _L terminal voltage		0		V _{CC}	V
	Power rating	R _{TOTAL} ≥ 10kΩ			10	mW
R _W	Wiper resistance	I _W = 1mA, V _{CC} = 5V		200	400	Ω
R _W	Wiper resistance	I _W = 1mA, V _{CC} = 2.7V		400	1000	Ω
I _W	Wiper current				±3.75	mA
	Noise	Ref: 1kHz		-120		dBV
	Resolution			3		%
	Absolute linearity ⁽¹⁾	V _{w(n)(actual)} - V _{w(n)(expected)}			±1	MI ⁽³⁾
	Relative linearity ⁽²⁾	V _{w(n+1)} - [V _{w(n)} + MI]			±0.2	MI ⁽³⁾
	R _{TOTAL} temperature coefficient			±300		ppm/°C
	Ratiometric temperature coefficient				±20	ppm/°C
C _H /C _L /C _W	Potentiometer capacitances	See circuit #3		10/10/25		pF

- Notes: (1) Absolute linearity is utilized to determine actual wiper voltage versus expected voltage = (V_{w(n)(actual)} - V_{w(n)(expected)}) = ±1 MI Maximum.
 (2) Relative linearity is a measure of the error in step size between taps = R_{w(n+1)} - [R_{w(n)} + MI] = ±0.2 MI.
 (3) 1 MI = Minimum Increment = R_{TOT}/31.
 (4) Typical values are for T_A = 25°C and nominal supply voltage.
 (5) This parameter is periodically sampled and not 100% tested

DC Electrical Specifications (Over recommended operating conditions unless otherwise specified.)

SYMBOL	PARAMETER	TEST CONDITIONS	LIMITS			UNIT

$t_{PU}^{(7)}$	Power-up to wiper stable			5	μ s
$t_R V_{CC}^{(7)}$	V_{CC} power-up rate	0.2		50	V/ms
t_{WR}	Store cycle		5	10	ms

Power-up and Down Requirements

There are no restrictions on the power-up or power-down conditions of V_{CC} and the voltages applied to the potentiometer pins provided that V_{CC} is always more positive than or equal to V_H , V_L , and V_W , i.e., $V_{CC} \geq V_H, V_L, V_W$. The V_{CC} ramp rate spec is always in effect.

AC Timing

- Notes: (6) Typical values are for $T_A = 25^\circ\text{C}$ and nominal supply voltage.
 (7) This parameter is not 100% tested.
 (8) MI in the A.C. timing diagram refers to the minimum incremental change in the V_W output due to a change in the wiper position.

Typical Relative% Error per Tap Position

Applications Information

Electronic digitally controlled (XDCCP) potentiometers provide three powerful application advantages; (1) the variability and reliability of a solid-state potentiometer, (2) the flexibility of computer-based digital controls, and (3) the retentivity of nonvolatile memory used for the storage of multiple potentiometer settings or data.

The price listed is the manufacturer's suggested retail price for quantities between 100 and 999 units. However, prices in today's market are fluid and may change without notice.

MSL = Moisture Sensitivity Level - per IPC/JEDEC J-STD-020

SMD = Standard Microcircuit Drawing

Description

The Intersil X9315 is a digitally controlled potentiometer (XDCP). The device consists of a resistor array, wiper switches, a control section, and nonvolatile memory. The wiper position is controlled by a 3-wire interface.

The potentiometer is implemented by a resistor array composed of 31 resistive elements and a wiper switching network. Between each element and at either end are tap points accessible to the wiper terminal. The position of the wiper element is controlled by the CS, U/D, and INC inputs. The position of the wiper can be stored in nonvolatile memory and then be recalled upon a subsequent power-up operation.

The device can be used as a three-terminal potentiometer or as a two-terminal variable resistor in a wide variety of applications including:

\$\$ control \$\$ parameter adjustments \$\$ signal processing

Key Features

- Solid-state potentiometer
- 3-wire serial interface
- 32 wiper tap points
 - Wiper position stored in nonvolatile memory and recalled on power-up
- 31 resistive elements
 - Temperature compensated
 - End to end resistance range $\pm 20\%$
 - Terminal voltage, 0 to V_{CC}
- Low power CMOS
 - $V_{CC} = 2.7V$ or $5V$
 - Active current, $50/400iA$ max.
 - Standby current, $1iA$ max.
- High reliability
 - Endurance, 100,000 data changes per bit
 - Register data retention, 100 years
- R_{TOTAL} values = $10k\Omega$, $50k\Omega$, $100k\Omega$
- Packages
 - 8 Ld SOIC, MSOP and PDIP
- Pb-free plus anneal available (RoHS compliant)

PT Parametric Data

Number of DCPs	Single
Number of Taps	32
Memory Type	Non-Volatile
Bus Interface Type	3-Wire (Up/Down)
Resistance Options (k Ω)	10, 50, 100
V _{CC} Range (V)	2.7 to 5.5
DCP Differential Terminal Voltage (V)	0 to +5.5
Terminal Voltage Range V _L to V _H (V)	0 to V _{CC}
Resistance Taper	Linear
Wiper Current (mA)	± 1
Wiper Resistance (Ω)	200
Standby Current I _{SB} (μ A)	1
