### Notes:

- $\odot$  The current in the application is limited by  $T_{JMax}$  and the thermal properties of the assembly.
- ② Not subject to production test- Verified by design / characterization.
- 3 Values influenced by parasitic L and C in measurement.
- $\P$   $V_{CC}$  = 80% (V\_{CES}),  $V_{GE}$  = 20V, L = 25  $\mu H,\ R_G$  = 10  $\Omega.$
- S Refer to AN-1086 for guidelines for measuring V<sub>(BR)CES</sub> safely

### **Additional Testing and Screening**

For Customers requiring product supplied as Known Good Die (KGD) or requiring specific die level testing, please contact your local IR Sales.

### **Shipping**

Sawn Wafer on Film. Please contact your local IR sales office for non- standard shipping options

### Handling

- Product must be handled only at ESD safe workstations. Standard ESD precautions and safe work environments are as defined in MIL-HDBK-263.
- Product must be handled only in a class 10,000 or better-designated clean room environment.
- Singulated die are not to be handled with tweezers. A vacuum wand with a non-metallic ESD protected tip should be used.

### Wafer/Die Storage

- Proper storage conditions are necessary to prevent product contamination and/or degradation after shipment.
- Note: To reduce the risk of contamination or degradation, it is recommended that product not being used in the
  assembly process be returned to their original containers and resealed with a vacuum seal process.
- Sawn wafers on a film frame are intended for immediate use and have a limited shelf life.
