NDS355AN N-Channel Logic Level Enhancement Mode Field Effect Transistor

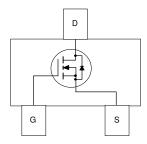

General Description

SuperSOT[™]-3 N-Channel logic level enhancement mode power field effect transistors are produced using ON Semiconductor's proprietary, high cell density, DMOS technology. This very high density process is especially tailored to minimize on-state resistance. These devices are particularly suited for low voltage applications in notebook computers, portable phones, PCMCIA cards, and other battery powered circuits where fast switching, and low inline power loss are needed in a very small outline surface mount package.

Features

- 1.7A, 30 V, $R_{DS(ON)} = 0.125 \Omega @ V_{GS} = 4.5 V$ $R_{DS(ON)} = 0.085 \Omega @ V_{GS} = 10 V.$
- Industry standard outline SOT-23 surface mount package using proprietary SuperSOT[™]-3 design for superior thermal and electrical capabilities.
- High density cell design for extremely low R_{DS(ON)}.
- Exceptional on-resistance and maximum DC current capability.
- Compact industry standard SOT-23 surface mount package.

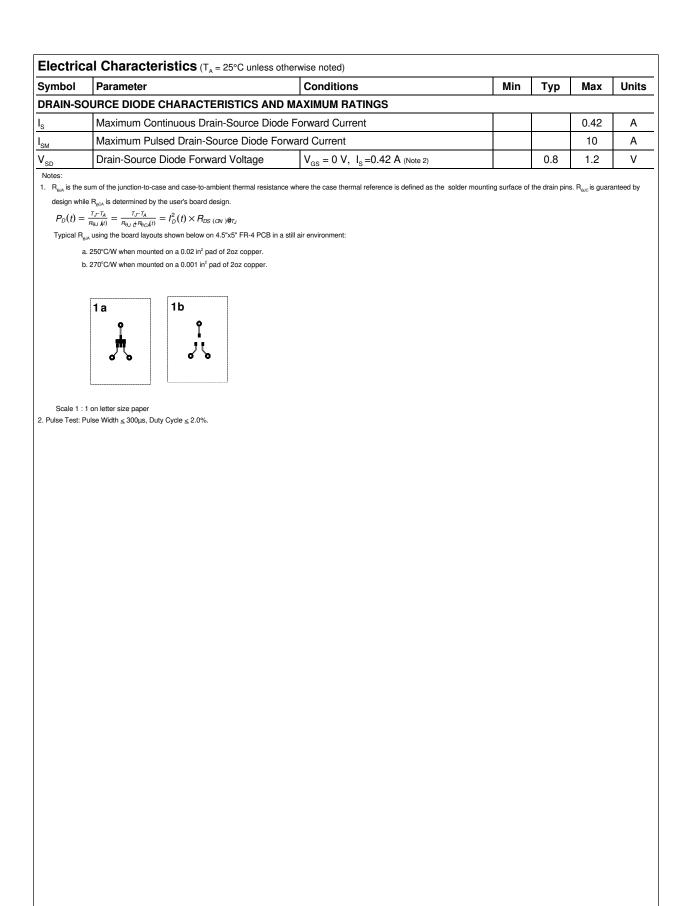

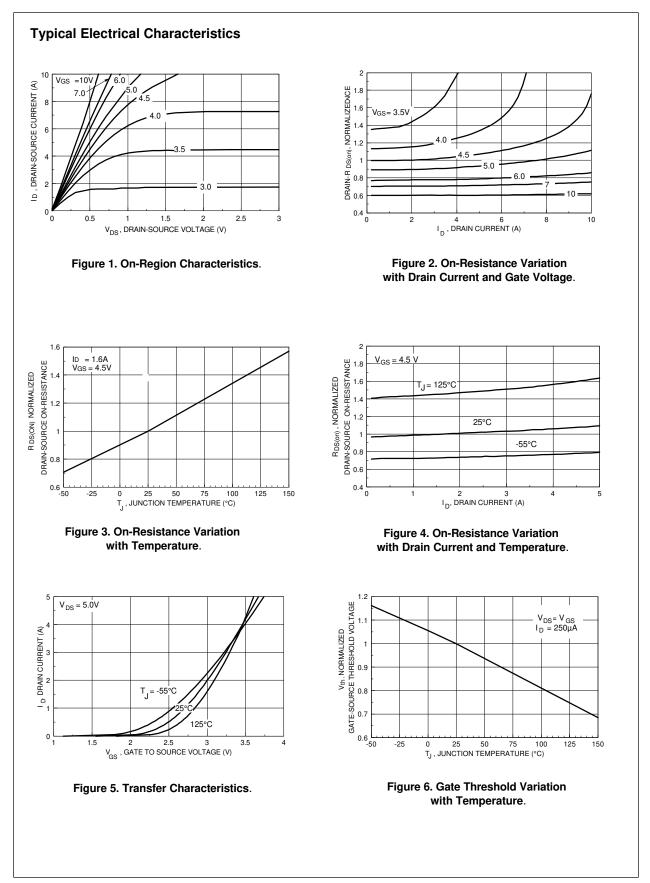

Absolute Maximum Ratings T_A = 25°C unless otherwise noted
